**II. PROJECT DESCRIPTION**

PROJECT AREA: 173.70 acres DRAINAGE AREA: 173.70 acres

DISTRICT DRAINAGE BASIN: IMPERIAL RIVER

RECEIVING BODY: ON-SITE RETENTION

CLASSIFICATION:

PURPOSE:

This application is a request for an Environmental Resource Permit to authorize construction and operation of a surface water management system to serve a 173.70 acre mining project with a total onsite retention system of the 25 year - 3 day storm event. Staff recommends approval with conditions.

## **BACKGROUND:**

This proposal was originally part of a larger project (635.55 acres total) which proposes a residential development with a large lake (200+ acres) in the center of the property to serve as a surface water management lake.

The site (635.55 acres) obtained a Lee County Development Order and approved Zoning for a borrow pit and residential subdivision which will expire on January 9, 1998. The zoning density is presently 1 unit per acre. A new density of 1 unit per 10 acres will apply unless the applicant complies with the following two items:

- An application for a Final Development Order shall be submitted and approved not later than three years from January 9, 1995 and;
- All on-site and off-site improvements permitted by the Final Development Order (including turn lanes, internal roadways, sewer, water, and surface water management system) shall be completed and a Certificate of Completion requested from Lee County not later than five years from the date that the Final Development Order is issued.

To comply with the county requirements, the project has been divided into two permit applications. The first application is this mining operation which may take several years (150 acres - 50 feet deep) to complete the excavation. The surface water management system for the mining operation may be certified when the surface water management system has been completed which does not include the full excavation of the pit as would be required if the pit was a lake within a residential project. The second permit application (#960516-6) is for residential development. The residential development shown on Exhibit 2, 3, 4 and 5 is under review and has not been authorized at this time. This will require a modification of the permit. The addition of the twelve lots within the mining area shown on Exhibit 4 will be part of that modification. The twelve lots are not permitted at this time.

Application 961122-6 and 960516-6 can function independently.

## **EXISTING FACILITIES:**

The site is a farming operation over a majority of the area. The typical drainage pattern is from the northeast to the southwest via existing farm ditches and sheetflow.

## **PROPOSED FACILITIES:**

The project proposes to construct a surface water management system to serve a 173.7 acre mining operation with on-site retention of the 25 year - 3 day storm event via a perimeter berm set at elevation 20.0' NGVD. The operation will be wet mining with an area of 149.6 acre and 50' deep. Temporary mining equipment will be transported to the site, erected and temporarily attached to

a foundation. At completion of mining, the equipment will be disassembled and removed from the site.

The residential development shown on Exhibit 2, 3, 4 and 5 is under review and has not been authorized at this time.

#### PROJECT SITE DESCRIPTION:

The project site consists of row crops, fallow cropland, upland pine flatwoods, upland pine flatwoods with melaleuca, Brazilian pepper dominated areas, and melaleuca dominated areas, as shown on Exhibit 6. There are no wetlands within the boundaries of this borrow pit operation.

The surrounding lands (571.33 acres) are proposed to be developed as a residential development (Application Number 960516-6) of which 132.03 acres are wetlands. The wetlands consist of cypress, wet prairie, and freshwater marsh; the uplands consist of row crops, upland pine flatwoods, upland pine flatwoods with melaleuca, areas dominated by Brazilian pepper, areas dominated by melaleuca, and disturbed areas.

The borrow pit operation will be contained within a perimeter berm. There are no wetland impacts associated with the borrow pit operation and no adverse

environmental impacts are anticipated.

Dear Mr. Thompson:

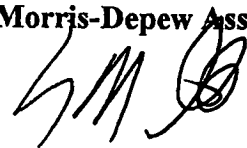

Attached you will find a copy of a construction completion certification submitted in February of 1999. We inadvertently transposed the application number for this permit. The permit number of 36-03178-P was accurate however. To correct this, we have prepared an amended construction certification form with the correct application numbers. These numbers are 961122-6 and 971202-9.

It is our understanding the field representatives inspected the perimeter berm of the project back in 1999. We have recently observed that it is still in place.

If you need additional information in this regard please do not hesitate to call.

Thank you,

Re: Corkscrew Woods Mining Construction Completion  
(SFWMD No 36-03178-P)

Dear Mr. Thompson:

The perimeter berm for the above referenced project has been completed. There is however a temporary deviation from the proposed berm alignment. The east portion of the perimeter berm has been constructed at the location of the final lake excavation limits (see allied plans). This berm will be relocated to the mining proposed limits prior to completion of the residential surface water management system. The berm is constructed to the minimum elevation and is designed to retain a 100-year storm event.

Additionally a 40 +/- foot high berm has been constructed as a buffer on the west & north property line. These berms will be removed prior to the completion of the mining activities.

Please let me know if you have any questions in this regard.
